

## CURRENT ICC PROFILES

Our company applies the ISO 12647-2 / 2013 standard in the production of certified proofs (hard proof), when making on-screen preview (soft proof) as well as by CMYK separation itself.

For that reason it is necessary to work with the following ICC profiles:

for the paper type 1 premium coated: **PSOcoated\_v3.icc**

for the paper type 5 uncoated woodless white: **PSOuncoated\_v3\_FOGRA52.icc**

If the printing conditions (type of paper and raster) are unknown in advance, for the CMYK separation it is recommended to use the **PSOcoated\_v3.icc** profile.

By agreement, we are then able to convert data into different profiles.
